***Examiner's Comment***

Examiner acknowledges that the applicant has amended claims 1, 5, & 7 and canceled claims 2-3, 6, & 8-9. Previously, claims 5 & 9 were indicated as allowable subject matter if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claims 1, 4-5, & 7 are pending in the application, while claim 1 included limitations of claims 3 & 9 and claim 5 included limitations of claim 1.

***Examiner's Statement of Reasons for Allowance***

The following is an examiner's statement of reasons for allowance: the claims (1 & 5) recite a light distribution control type illuminator comprising, a light source, a reflecting mirror, a path changing mirror, a casing, a holding means, wherein the path changing mirror is a light reflector shaped like a flat plate or curved plate and having ridges in section and that are arranged side by side in contact with one another, furthermore the light reflector having a reflecting face and a transparent body portion on the reflecting face, the transparent body portion being composed of the ridges, or a flat or curved structure in which surfaces of the ridges have a light reflecting function.

Because none of the references disclosed the details of path changing mirror having light reflecting ridges arranged side by side, a reflecting face, and a transparent body portion, nor is there any motivation to combine details of the light distribution control illuminator, the claims are deemed patentable over the prior art of record.

Ito Moriyuki (JP 11-111005) teaches a light source (2) for radiating light through electric discharge between opposing electrodes (Drawing 1), a reflecting mirror (4) for

reflecting a flux of light that is radiated from the light source (2) in order to control the angle of the flux of light ("*converging beam*" shown in Drawing 1), and a path changing mirror (10) for changing the path of the flux of light whose divergence (8) has been controlled by the reflecting mirror (10), the light source (2) being placed in a manner that makes an axis (e.g., 32) line connecting the electrodes of the light source (Drawings 1 & 4), or other reference lines used to specify a posture of the light source, substantially coincide with a center line of the flux of light controlled by the reflecting mirror, the path changing mirror (10) redirecting the controlled flux of light to a desired direction around the center line of the controlled flux of light (Drawings 2-3), a casing (1) for housing the light source (2) and the reflecting mirror (4) which controls the angle of a flux of light emitted from the light sources, and a path changing mirror (10) container (6) set on a controlled light flux path side of the casing to house the path changing mirror (10), the path changing mirror container being attached to the casing (Drawing 1) in a manner that allows the path changing mirror container to rotate (14) about a travel direction axis (e.g., 26, 28) line of the control flux of light. However, Ito Moriyuki fails to include details of the path changing mirror as described in claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JACOB CHOI whose telephone number is (571)272-2367. The examiner can normally be reached on Monday-Friday (7:00-5:00).
